

S1 No	Question/Incident/	APPLICABLE SERVER LEVEL.	Answer/Solution
21	Self Service reports doesn't work (though the reports server is up).	APPLICATION	'ICX:Report link' profile option should be checked for proper path.
22	'Workflow Notification mailer' doesn't go through the id/password validation string.	APPLICATION	If the userid and passwords are correct, the only reason should be that the account is locked.
23	Concurrent Managers do not come up even after the concurrent server is started.	APPLICATION	Normally, they should be up after few minutes. If not, 'update statements from 'cmdclean.sql' should be run.
24	LPO printing has a problem when the request is run.	APPLICATION	Normally, this is done by Mr Abdul Lateef Bai or Mr Ghazi and this concurrent request has no local print but has one copy printed on network printer attached to Maysoon's PC. Might be due to network printer connectivity. Restart the same.
25	Oracle service	APPLICATION/DATABASE	If the server is trying to connect, is available, then restarting the machine should solve the issue.

	starts and stops.		
26	Forms do not open for any user.	APPLICATION	Check the database connectivity through APPS user and also if the forms server is running fine then check the 'ICX:Forms Launcher' profile option to make sure it points to the right server.
27	Reports do not open for any user.	APPLICATION	Check the database for connectivity through APPS user and also if the report server is running fine then check the ICX:Report profile option to make sure it points to the right server.
28	Location for media files in the E-Business Suite.	DATABASE	E:\Oracle\proderp\proderpcomn\java\oracle\apps\media
29	Dos equivalent of grep command (for file search)	ANY SERVER	<p>Got to the directory where the find has to be done for a string in the all the files in the folder and its sub folders :</p> <pre>Dir find "stringtobesearchedfor" > list.txt</pre> <ul style="list-style-type: none"> ■ List.txt , written at the root of the folder from where the find is run , has the full path of the files whose name has the search string as part of the file name.
30	Re-Compile all invalid objects in the database through a script.	DATABASE SERVER	<p>Run 'utlprp.sql' location in the following path :</p> <p>OracleHome\RDBMS\ADMIN\utlprp.sql</p>
